

Direct Restorative Protocols for the General Dentist: Hands On

This hands-on course aims to update the general practitioner on a variety of topics that affect the biological response, esthetics and longevity of composite restorations.

Learning objectives

- Recognize the key determinants of biological considerations that are essential in restorative dentistry.
- Select an isolation technique compatible with bonding procedures.
- Recognize signs of occlusal instability (risk factors) for best protection of your restorations.
- Select the appropriate resin composite system based on the functional needs of the case.
- Recognize the need for a base or liner prior to final restoration.

And more!

Presented by Dr. Mario Romero

Dr. Mario Romero is an Associate Professor and Director of the Advanced Education in General Dentistry Program at The Dental College of Georgia at Augusta University; he is a 1995 graduate from the University of Guayaquil School of Dentistry in his native country of Ecuador.

He has over 40 publications in national and international peer reviewed journals and has lectured extensively on topics related to direct and indirect restorative dentistry. He maintained a private practice with emphasis in Esthetics and Restorative Dentistry for 15 years prior to joining AU in 2013.
